Who is this for?

Anatomy of a failed change agent...

“Oh, this sounds interesting...”

“It is! Happy to have you aboard JC!”

“We should try this...”

“What is John saying? What does he want?”

“We need more of that! But how?”

“John is causing mass agitation!”

“Ugh. Politics as usual...”

“Danger! DANGER!”

“I guess this will never change...”

Professional Canary in a Coal Mine

Confusion (externally, and personally) between...

My personal needs (including a new to “fix”)

**Advocating for participatory continuous
improvement (the process, not specific outcomes)**

Specific interventions (e.g. let's do this)

Change agent V2(or 10)...

**It is hard. For everyone.
Some are healthier than others.**

OKRs?

Canvas X?

Canvas Y?

Discovery Sprints?

Research Sprints?

Google Sprint?

Jobs-to-be-done?

One-pagers?

Tribes and squads?

HEART?

AARRR?

In my own experience doing this over the years I've found it's the opposite of the Anna Karenina principle.

Unhappy teams and orgs are often **very** similar, while happy/successful teams and orgs can be quite different.

Structural/Cultural (27)

- Org structure, silos (3)
- Command and control culture, “politics” (4)
- Fear of failure, risk aversion, urge for predictability (4)
- Trust and safety, motivation, change resistance (3)
- Team autonomy, ability to collaborate (3)
- Communication (1)
- No clear ownership, Discipline (2)

Alignment, Strategy, Decision-Making (25)

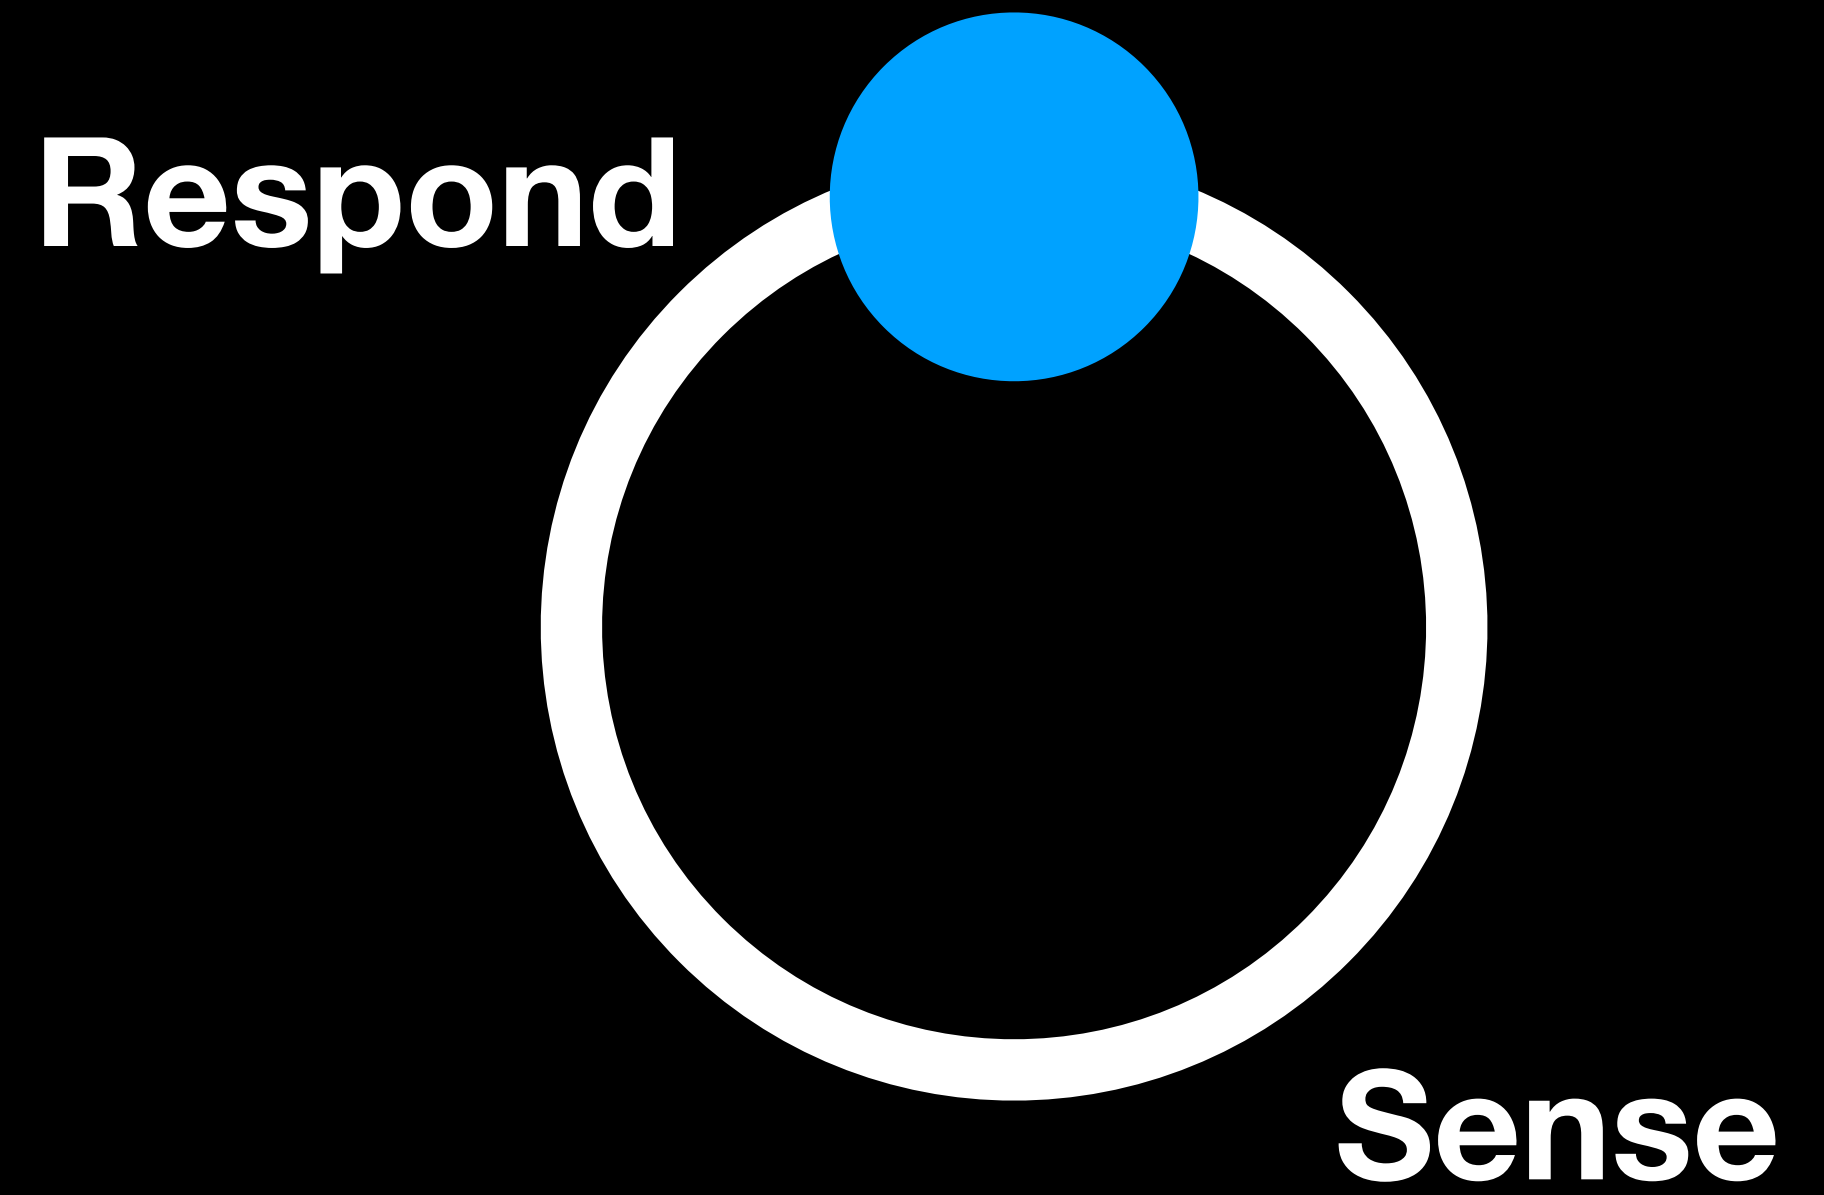

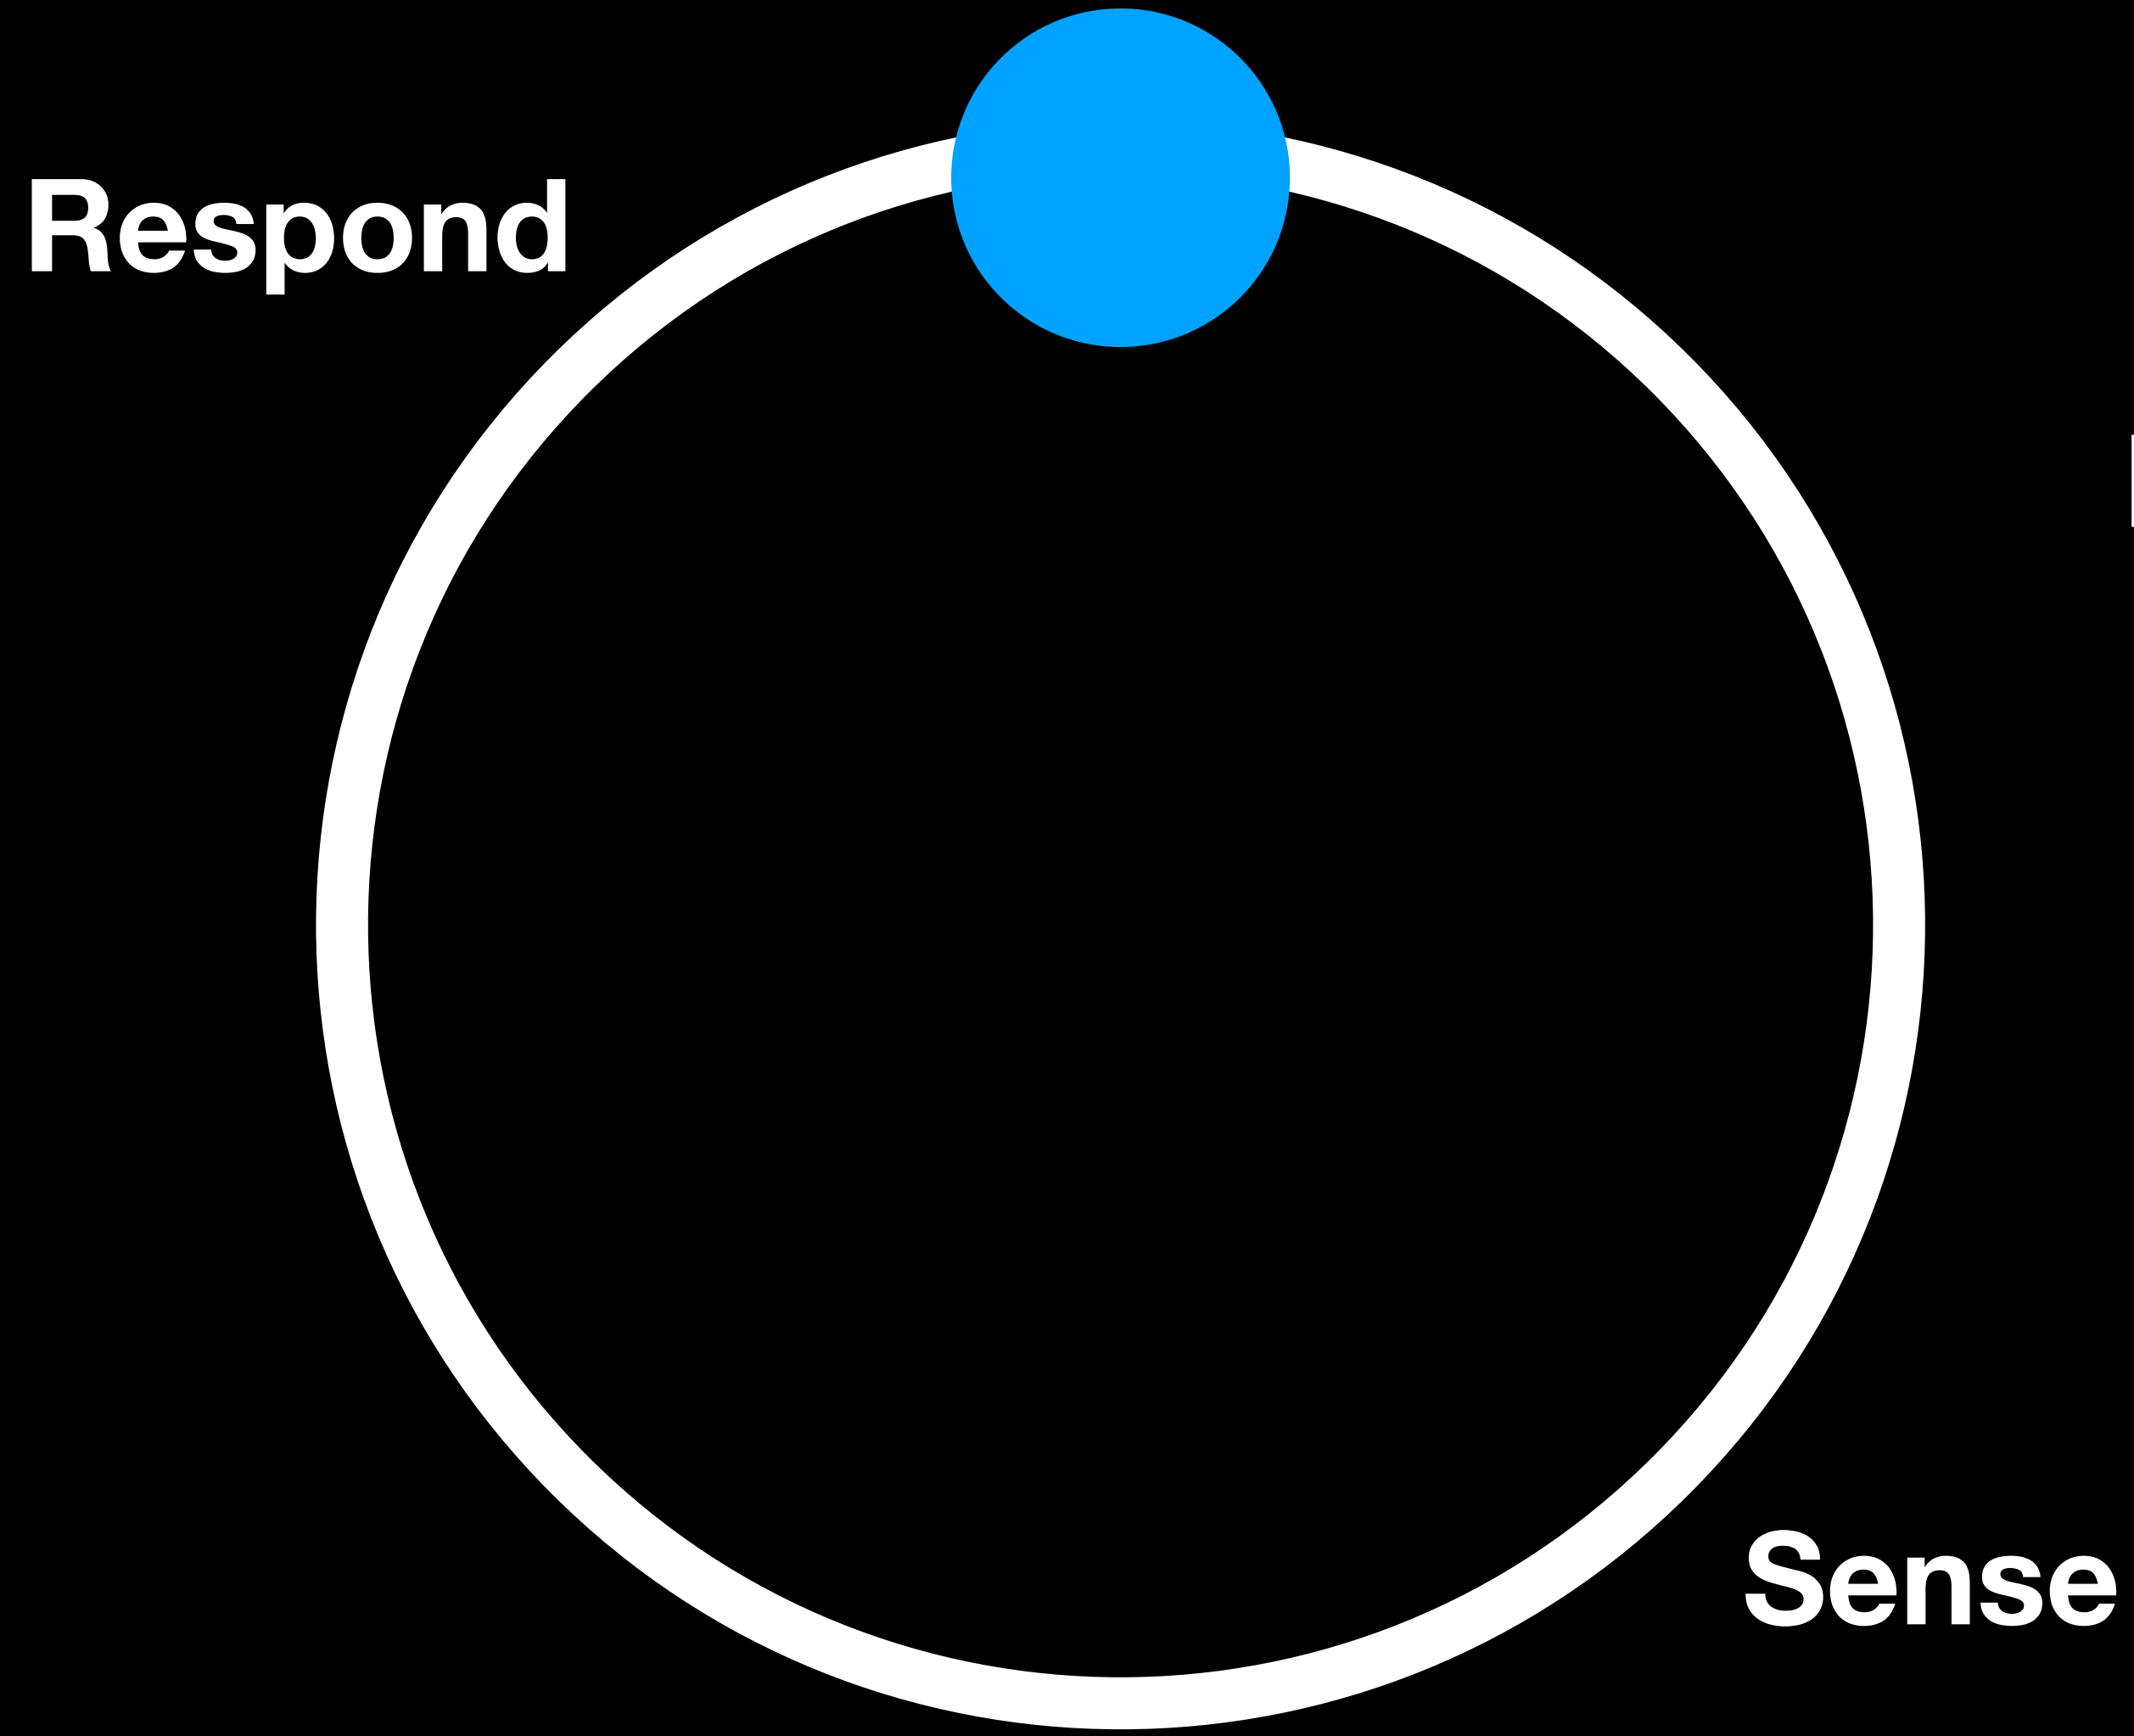

- Connecting high-level goals to team activities. Goal setting ineffective (e.g. OKRs) (2)
- HIPPO prioritization, “great idea-ism”, success theater (4)
- Constantly shifting priorities, lack of focus. Lack of product strategy, deep work, clear vision and direction. Lack of context and the why. Unclear who user/customer is (6)
- Difficulty aligning. No proper kickoff (2)
- Ignore existing data. “Gut based” decision culture (2)
- Premature convergence, premature solutioning (3)

Revenue Pressure, Deal Closing, Feature Factory (17)

- Pressure to close deals. Too sales driven. Short term revenue/”growth story” focus (5)
- Myopic focus on individual customer needs (2)
- Feature-centrism, output-centrism (4)
- Copying competitors, copy-cat
- Don’t see value, can’t justify investment. “What we’re doing is working”
- Don’t feel competitive pressure

Busyness, High-Utilization, Constraints (14)

- Too many constraints and dependencies (1)
- Too busy, lack of slack time. Firefighting (4)
- Focus on deadlines/timelines
- Vendor relationship (1)
- Technical debt inhibiting velocity, legacy decisions/software (3)

A whole universe of safe to fail hacks
Focus on the OS for “trying things”
Coherence and sense-making
Offer ideas occasionally

The big ideas...

Product development is a beautiful, fractal, networked mess

Efforts to simplify or standardize often backfire

Treating it like a factory often backfires

Reflect on what is actually happening

Create a flow of meaningful stories

Embrace the mess

Mirrors are powerful.

A quick Feature Factory detour...

12 Signs You're Working in a Feature Factory

John Cutler

Nov 16, 2016 · 4 min read

Angst is easy (and easy to trigger)

People crave certainty (and uncertainty = opportunity)

People have a deep, deep need for a sense of impact

People have a deep, deep need for coherence

More about a constant flow of impactful stories

Difficult to get anything “out the door”. Extremely long feedback loops. *Impact Total*

6

Well oiled feature factory. Reasonably usable features. Reasonably happy customers. Occasional wins.

27

Rapid feedback loops. More repeatable wins (and bigger wins). More with less complexity.

49

Time

1

Framing things as bets...

“So that is your bet? Let’s talk about it...”

Bets can be...

Big

Small

Risky

Safe

Prescriptive

Descriptive

Big batch

Increment friendly

Upfront gamble

Change bet over time

Networked/connected

Isolated

<http://tiny.cc/you-betcha>

In the not-so-distant future we will see the commodification of [some customer/user need, technology service, etc.]. There will be a lowering of prices, and a focus on scale and reliability. This will present the following opportunities: [ways to exploit this shift to commodification], but also trigger the following challenges: [threats to mitigate].

We believe that by focusing on [some intervention] we will make it possible for customers to [achieve some outcome] more [efficiently, accurately, joyfully, effectively], which we believe will benefit the business by [some business benefit, or causal chain].

Operationally, we know we have been been deprioritizing [some process, system, activity]. We realize this causes pain and frustration to our people by [some observable pain points, frustration]. The important bet that we hope will offset this short-term pain is that we are [some larger, valuable bet].

We are betting that customers will continue to use our product because [some value proposition] despite the fact that other products are more [positive attributes of competitive products].

You could call [some set of interventions, or class of interventions] as our “safe bet”. We put time/money in, and get outcomes out. For example, [a scenario described with inputs and outputs]. As with all good things, this could come to an end. The most likely threats are [some list of threats to this predictability].

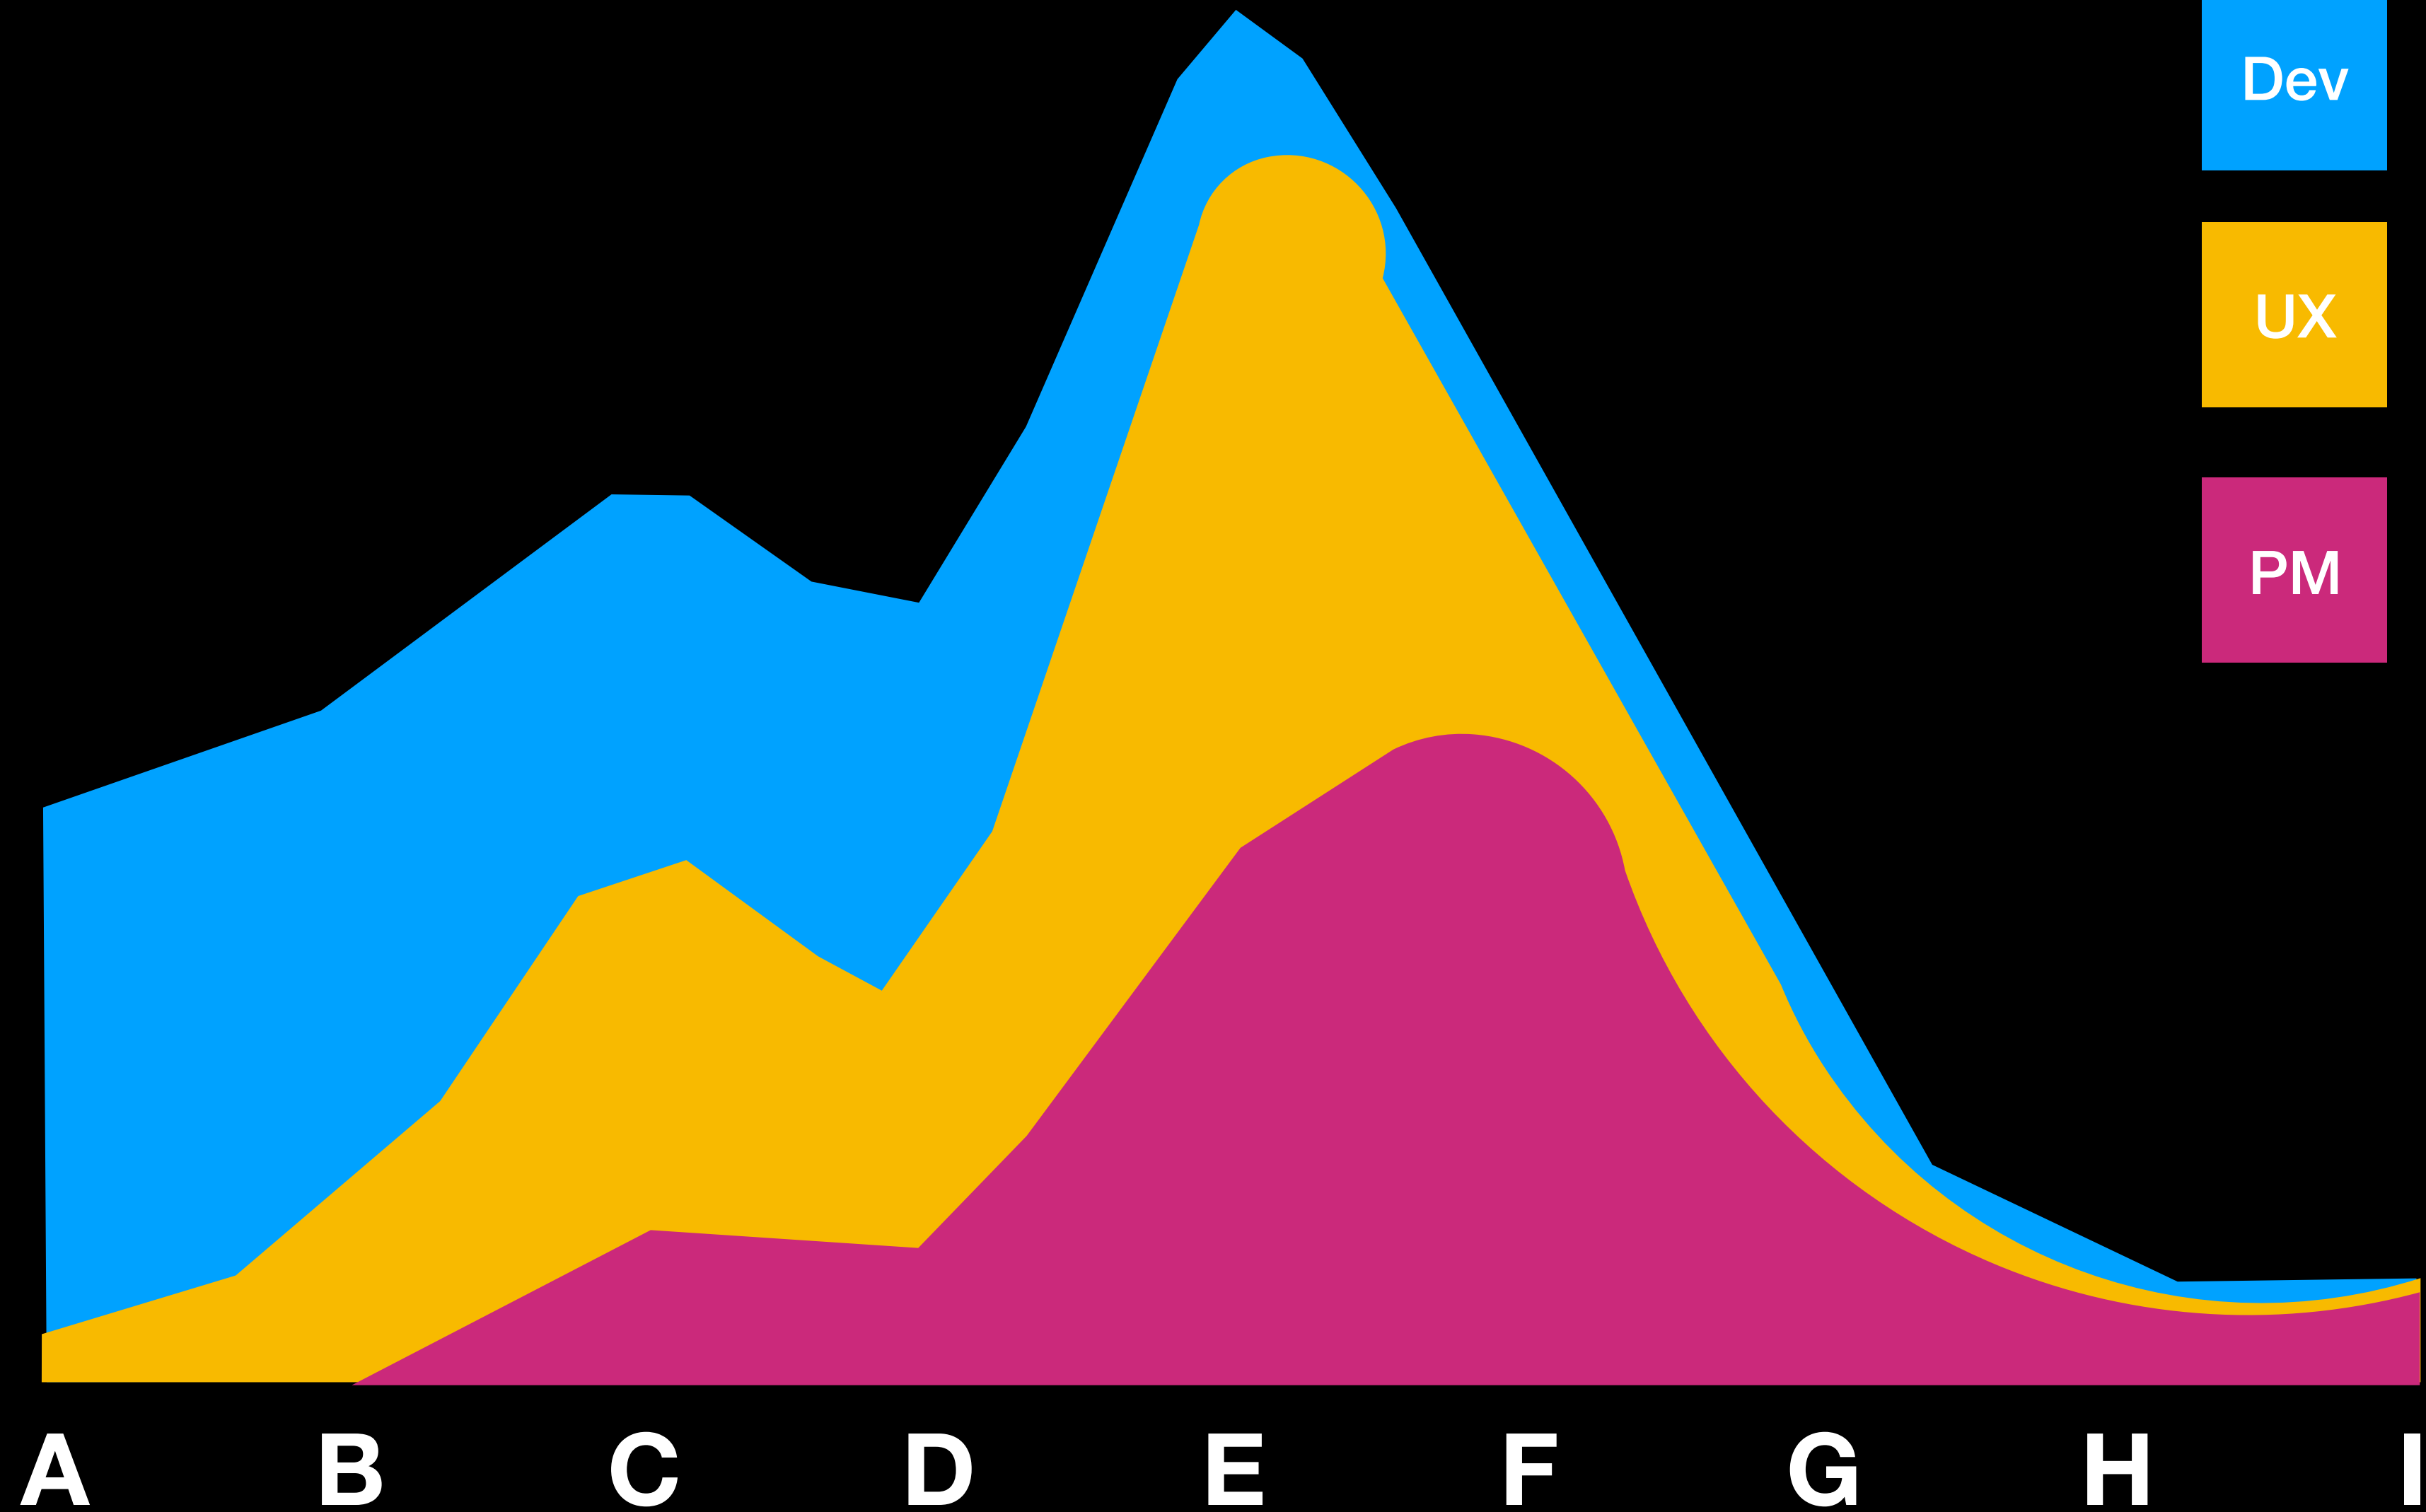

Write some BetLibs

2

The work takes on different shapes...

- A. Build exactly this [to a predetermined specification]
- B. Build something that does [specific behavior, input-output, interaction]
- C. Build something that lets a segment of customers complete [some task, activity, goal]
- D. Solve this [more open-ended customer problem]
- E. Explore the challenges of, and improve the experience for, [segment of users/customers]
- F. Increase/decrease [metric] known to influence a specific business outcome
- G. Explore various potential leverage points and run experiments to influence [specific business outcome]
- H. Directly generate [short-term business outcome]
- I. Generate [long-term business outcome]

Vs.

- How does work appear in these queues?
- How often? With advance notice? Who puts work in these queues?
- Dependencies on other groups
- Deadline? (real or not)
- Cost of being late (or not delivering feature)
- Size of effort
- Expect impact of item
 - Ability to measure impact (and time)
- Data on existing usage
- Who is advocate? Who are stakeholders?
- What is solution certainty? (range)
- What is problem uncertainty?
- Impacting current customers?
- Type of design work
 - Core improvements
 - New feature development
 - Band-aids/fixes
- Skills/functions required
- Customer visibility
- Collaboration model (e.g. contractor teams)
- Urgency (P0, P1, P2)
- Assumptions / beliefs
- Learning goal? Permanence?
- Risks willing to incur
- Needed / caused by / blocked by tech debt
- Background / prior story / veracity of data
- Headwinds / blockers
- Connected to core strategy?
- Reactive vs proactive
- Tech used
- Org visibility
- PIA factor / fun factor
- Do not disturb - focus required
- Solve tech debt / add new tech debt
- When do you need to know the info?
- Who needs to be around?

“Got it! So we will have a PRD template that EVERYONE needs to fill in, and review it at each and every handoff?”
